Question **1**

Correct

Marked out of 5.00

 Flag question

create a class called College with attribute String name, constructor to initialize the name attribute , a method called Admitted(). Create a subclass called CSE that extends Student class, with department attribute , Course() method to sub class. Print the details of the Student.

College:

```
String collegeName;

public College() {}

public admitted() {}

Student:

String studentName;

String department;

public Student(String collegeName, String studentName,String depart) {}

public toString()

Expected Output:

A student admitted in REC
CollegeName : REC
StudentName : Venkatesh
Department : CSE
```

For example:

| Result  |
|---|
| A student admitted in REC<br>CollegeName : REC<br>StudentName : Venkatesh<br>Department : CSE |

Answer: (penalty regime: 0 %)

Reset answer

```
1 class College
2 {
3     public String collegeName;
4
5     public College(String collegeName) {
6         // initialize the instance variables
7         this.collegeName=collegeName;
8     }
9
10    public void admitted() {
11        System.out.println("A student admitted in "+collegeName);
12    }
13 }
14 class Student extends College{
15
16     String studentName;
17     String department;
18
19     public Student(String collegeName, String studentName,String department) {
20         // initialize the instance variables
21         super(collegeName);
22         this.studentName=studentName;
23         this.department=department;
24     }
25
26
27     public String toString(){
28         // return the details of the student
29         return "CollegeName : "+collegeName+"\n"+"StudentName : "+studentName+"\n"+"Department : "+department;
30     }
31 }
32 public class Main {
33     public static void main (String[] args) {
34         Student s1 = new Student("REC","Venkatesh","CSE");
35         s1.admitted(); // invoke the admitted() method
36         System.out.println(s1.toString());
37     }
38 }
```

| Expected  | Got   |
|---|---|
| A student admitted in REC<br>CollegeName : REC<br>StudentName : Venkatesh<br>Department : CSE | A student admitted in REC<br>CollegeName : REC<br>StudentName : Venkatesh<br>Department : CSE |

Passed all tests!

Question **2**

Correct

Marked out of 5.00

Create a class Mobile with constructor and a method basicMobile().

Create a subclass CameraMobile which extends Mobile class , with constructor and a method newFeature().

Create a subclass AndroidMobile which extends CameraMobile, with constructor and a method androidMobile().

display the details of the Android Mobile class by creating the instance. .

```
class Mobile{  
  
}  
class CameraMobile extends Mobile {  
  
}  
class AndroidMobile extends CameraMobile {  
  
}
```

expected output:

Basic Mobile is Manufactured  
Camera Mobile is Manufactured  
Android Mobile is Manufactured  
Camera Mobile with 5MG px  
Touch Screen Mobile is Manufactured

**For example:**

| Result  |
|---|
| Basic Mobile is Manufactured<br>Camera Mobile is Manufactured<br>Android Mobile is Manufactured<br>Camera Mobile with 5MG px<br>Touch Screen Mobile is Manufactured |

**Answer:** (penalty regime: 0 %)

```
1 class mob{  
2  
3     mob(){  
4  
5         System.out.println("Basic Mobile is Manufactured");  
6     }  
7     void basmob(){  
8         System.out.println("Basic Mobile is Manufactured");  
9     }  
10 }  
11 class cam extends mob{  
12     cam(){  
13         super();  
14         System.out.println("Camera Mobile is Manufactured");  
15     }  
16     void newm(){  
17         System.out.println("Camera Mobile with 5MG px");  
18     }  
19 }  
20 }  
21 class and extends cam{  
22     and(){  
23         super();  
24         System.out.println("Android Mobile is Manufactured");  
25     }  
26     void andmob(){  
27         System.out.println("Touch Screen Mobile is Manufactured");  
28     }  
29 }  
30 public class Main{  
31     public static void main(String[] args){  
32         and andmob=new and();  
33         andmob.newm();  
34         andmob.andmob();  
35     }  
36 }  
37 }
```

| Expected  | Got   |
|---|---|
| Basic Mobile is Manufactured<br>Camera Mobile is Manufactured<br>Android Mobile is Manufactured<br>Camera Mobile with 5MG px<br>Touch Screen Mobile is Manufactured | Basic Mobile is Manufactured<br>Camera Mobile is Manufactured<br>Android Mobile is Manufactured<br>Camera Mobile with 5MG px<br>Touch Screen Mobile is Manufactured |

Passed all tests!

Create a class known as "BankAccount" with methods called deposit() and withdraw().

Create a subclass called SavingsAccount that overrides the withdraw() method to prevent withdrawals if the account balance falls below one hundred.

**For example:**

| Result   |
|--|
| Create a Bank Account object (A/c No. BA1234) with initial balance of \$500:<br>Deposit \$1000 into account BA1234:<br>New balance after depositing \$1000: \$1500.0<br>Withdraw \$600 from account BA1234:<br>New balance after withdrawing \$600: \$900.0<br>Create a SavingsAccount object (A/c No. SA1000) with initial balance of \$300:<br>Try to withdraw \$250 from SA1000!<br>Minimum balance of \$100 required!<br>Balance after trying to withdraw \$250: \$300.0 |

**Answer:** (penalty regime: 0 %)

Reset answer

```
1 class BankAccount {  
2  
3     // Private field to store the account number  
4  
5     private String accountNumber;  
6  
7     // Private field to store the balance  
8     private double balance;
```

```

9
10 // Constructor to initialize account number and balance
11 public BankAccount(String accountNumber,double balance){
12     this.accountNumber=accountNumber;
13     this.balance=balance;
14 }
15
16
17
18 // Method to deposit an amount into the account
19 public void deposit(double amount) {
20     // Increase the balance by the deposit amount
21     balance+=amount;
22 }
23
24 // Method to withdraw an amount from the account
25 public void withdraw(double amount) {
26     // Check if the balance is sufficient for the withdrawal
27     if (balance >= amount) {
28         // Decrease the balance by the withdrawal amount
29         balance -= amount;
30     } else {
31         // Print a message if the balance is insufficient
32         System.out.println("Insufficient balance");
33     }
34 }
35
36 // Method to get the current balance
37 public double getBalance() {
38     // Return the current balance
39     return balance;
40 }
41
42 public String getAccountNumber(){
43     return accountNumber;
44 }
45 }
46 class SavingsAccount extends BankAccount {
47     // Constructor to initialize account number and balance
48     public SavingsAccount(String accountNumber, double balance) {
49         // Call the parent class constructor
50         super(accountNumber,balance);
51     }
52 }

```

| Expected   | Got   |
